

Creating Image Effects in Photoshop

Photoshop for the Web

Image Effects using Adjustment Layers.

You can create numerous image effects using the Adjustment Layers in the Layers panel.

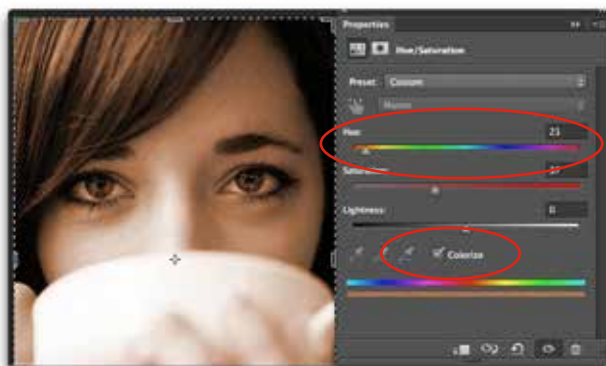

Select the YingYang symbol (Adjustment Layers) at the bottom of the Layers panel. Below are some suggested Adjustments you can make to your images.

Adjustment Layer: Invert

Adjustment Layer: Posterize

Adjustment Layer: Hue Saturation

Colorize: Use the Hue/Saturation adjustment layer to create a colorization to an image. Check the Colorize box and slide the Hue slider for various colors for the overlay. This effect is often used to create sepia toned for antique-style images.

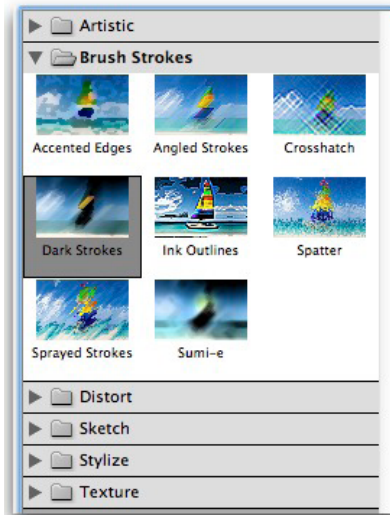

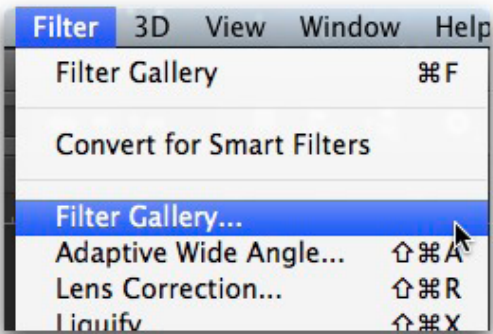

Adjustment Layer: Black & White

In the **Black and White** adjustment layer you can adjust the color levels of the original to adjust the gray levels in the image.

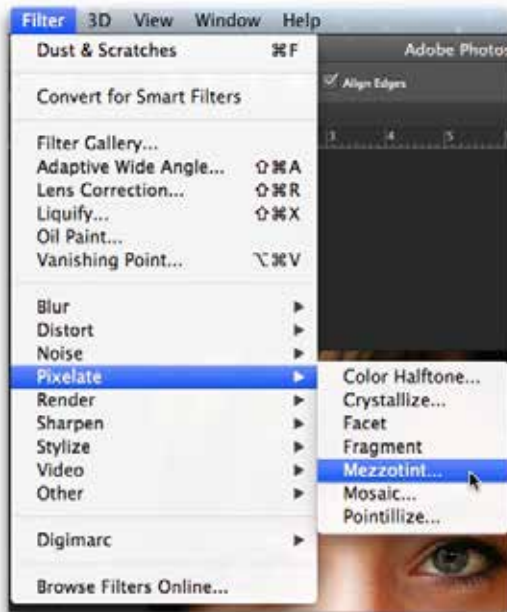

Play with the settings. You can create some interesting and dynamic effects!

Filter Gallery: Dark Strokes

Filter Gallery.

Photoshop has a Filter Gallery where you can apply numerous artistic effects.

Other Filters.

Photoshop also has other filters that you can apply. Try these filters: Oil Paint and Pixelate.

Filter: Oil Paint

Filter: Pixelate>Mezzotint>Short Lines

Filter: Solarize
